CONFIRM SIMULATION STATE

RABIES: THE SLOW CLIMB TO THE BRAIN

THE VACCINE STILL WORKS AFTER THE BITE.

HOW PASTEUR BUILT THE VACCINE

STEP 1

grow the virus in **RABBITS** — it gets predictable

STEP 2

DRY IT IN A FLASK — the longer it dries, the **WEAKER** the virus

STEP 3

~50 **DOGS** vaccinated — then exposed to rabies... and they **DIDN'T** get sick

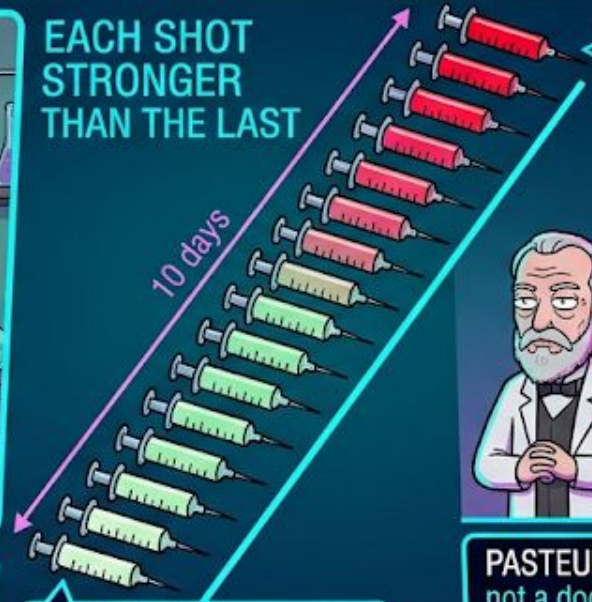

WEAKEN THE MONSTER FIRST, THEN SHOW IT TO THE BODY.

6 JULY 1885 — THE BOY WITH 14 BITES

JOSEPH MEISTER, age 9 — bitten 14 times, 2 days earlier

EACH SHOT STRONGER THAN THE LAST

fresh = strongest

dried 15 days = weakest

PASTEUR — not a doctor, can't inject

DR. GRANCHER — gave the shots

ROUX — refused

HE NEVER GOT RABIES.

THE SECOND BOY — AND THE NEWS EXPLODES

ONE BOY = AN EXPERIMENT.
TWO BOYS = A METHOD.

THE SHIELDS EVERY KID GETS

INVENTORY

MEASLES (MMR)

POLIO

DTaP — diphtheria, tetanus, whooping cough

Hib

PNEUMOCOCCUS

HEPATITIS B

CHICKENPOX

HPV

given to teens — blocks a cancer later

vaccines = 40% of the drop in baby deaths over 50 years

measles is one of the most contagious diseases on Earth

smallpox: GONE. polio: almost gone

YOUR SHIELDS WERE EARNED BY 230 YEARS OF SCIENCE.
